

Prepare for CMMC Certifications with Kratos Consulting Services

FCI and CUI Protection

With many organizations preparing for the soon-to-be-enforced Cybersecurity Maturity Model Certification (CMMC) requirements, now is the time to prepare. It is anticipated that CMMC will be phased into DoD by early 2025. Once DoD begins phasing CMMC into RFPs, prime and sub-contractors doing business with the DoD must achieve CMMC certification as a prerequisite to new contract awards.

The Cyber AB is continuing to accredit CMMC Third Party Assessment Organizations (C3PAO) while also vetting Registered Provider Organizations (RPO). Leveraging C3PAO and RPO subject matter experts best prepares your organization for an eventual assessment against CMMC practice requirements. Kratos provides several advisory services that accelerate time to certification.

Boundary Identification and Definition Support

- Analysis of the system environment to identify and define the authorization boundary
- Development of authorization boundary and data flow diagrams, along with a system inventory in accordance with the authorization boundary

Gap Analysis

- Simulates a C3PAO assessment, determining compliance against the CMMC practice requirements
- Includes recommendations for practice remediation and overall cybersecurity posture improvement
- Recommendations and priorities are condensed into a roadmap to drive efficient use of resources

Documentation Support Services

- Supports the development of documentation that addresses all CMMC practice requirements
- Identifies objective evidence requirements to support CMMC practice implementation
- Policy, procedure, and plan templates mapped directly to CMMC requirements available, as needed

Process and Engineering Consulting Services

- Provides requirements-driven recommendations on new existing processes and operations to ensure alignment with CMMC practice requirements
- Provides technical recommendations on architecture, configuration, tooling, reporting, and automation to meet CMMC practice requirements

Our Reputation

As one of the first accredited C3PAOs, Kratos has over 25 years of extensive compliance and certification experience with government and commercial standards requirements including:

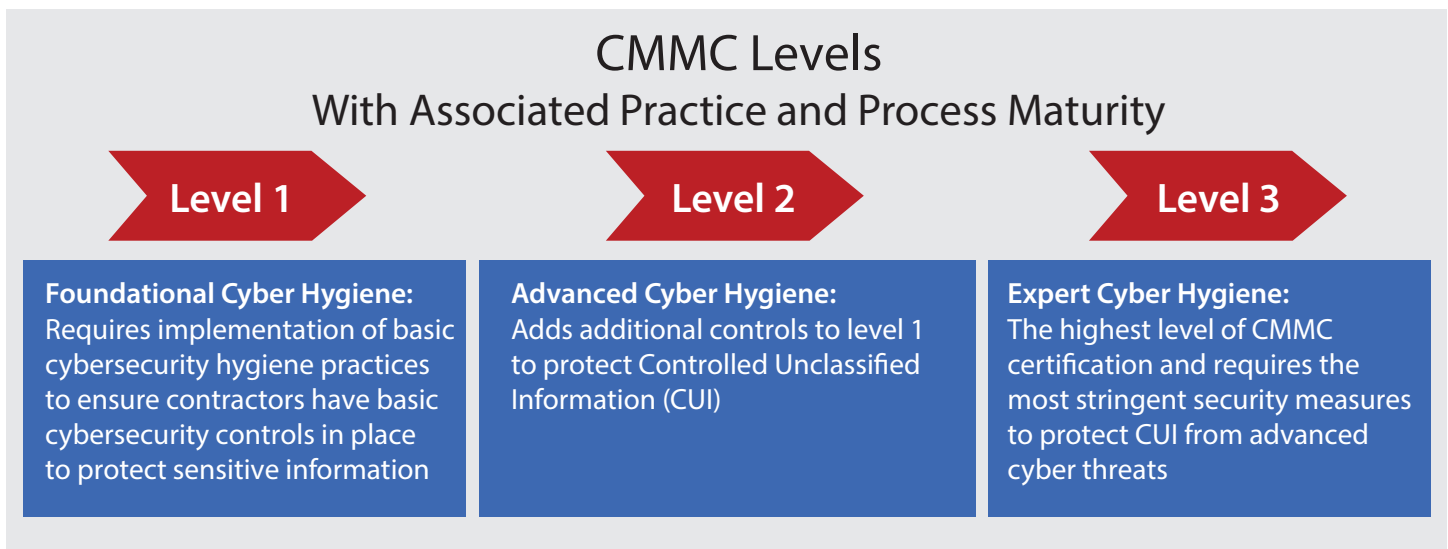

- Federal Risk and Authorization Management Program (FedRAMP);
- DoD Security Requirements Guide (SRG)
- ISO 27001
- HITRUST
- NIST Special Publication Series 800 & 1800
- StateRAMP

Strategic Industrial Base Security

As a leading authority on NIST-based standards, Kratos can evaluate compliance ahead of a formal assessment, provide specified consulting to address compliance gaps (technical and procedural), and develop needed documentation.

Three Levels of CyberSecurity Maturity

CMMC consists of 3 maturity level certification levels. Level 1 certification are self-assessments. Level 2 assessments require an assessment by a C3PAO. Finally, Level 3 assessments, which require Level 2 certification as a pre-requisite and are a delta assessment against only the Level 3 practices, are performed by the DoD, only.

Kratos is an accredited C3PAO and registered RPO. We are providing advisory support to many customers, joint surveillance program assessments to early adopters, and are authorized to conduct assessments once the CMMC rulemaking is completed.
